Listing of the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-156 (cancelled)

Claim 157. (Previously presented) An apparatus, comprising:

a deformable capsule that comprises a closed end structure, a wall, and a sealable end structure, and which defines a chamber configured to receive a material and a solvent, wherein

the wall adjoins the closed end and extends therefrom, and the sealable end structure adjoins the wall opposite the closed end structure, and

the solvent is capable of becoming supercritical at a predetermined temperature to provide a predetermined pressure in the chamber, and the predetermined pressure is greater than about 5 kbar and is sufficient to deform the capsule, wherein

the sealable end structure is operable to seal the chamber such that the capsule is impermeable to supercritical solvent at the predetermined temperature and predetermined pressure; and

a zero-stroke pressure device configured to receive the capsule and operable to counterbalance the predetermined pressure generated within the chamber by the supercritical solvent at the predetermined temperature.

Application No. 09/683,659
Reply to Office communication of March 17, 2006

RD-26623-1

Claim 158. (Previously presented) The apparatus as defined in claim 157, wherein the zero-stroke pressure device is operable to only counterbalance the predetermined pressure.

Claim 159. (Previously presented) The apparatus as defined in claim 157, wherein the predetermined temperature is at least about 550 degrees Celsius.

Claim 160. (Previously presented) The apparatus as defined in claim 157, wherein the capsule comprises one or more of copper, gold, silver, palladium, platinum, iridium, ruthenium, rhodium, osmium, iron, nickel, titanium, vanadium, chromium, zirconium, niobium, molybdenum, tantalum, tungsten, or rhenium.

Claim 161. (Previously presented) The apparatus as defined in claim 157, wherein the capsule comprises one or more of copper-based alloy, iron-based alloy, or nickel-based alloy.

Claim 162. (Previously presented) The apparatus as defined in claim 157, wherein the capsule comprises a lid, and the lid is operable to sealingly engage the sealable end structure.

Claim 163. (Previously presented) The apparatus as defined in claim 162, wherein the lid has a first pipe thread, and the sealable end structure has a second pipe thread configured to engage the first pipe thread, and the lid is sealable to the wall at the sealable end structure by a pipe thread seal.

Claim 164. (Previously presented) The apparatus as defined in claim 162, further comprising a compression fitting, and wherein the lid is sealable to the wall at the

sealable end structure by a metal-to-metal compression seal formed by the compression fitting.

Claim 165. (Previously presented) The apparatus as defined in claim 162, further comprising a gasket, and wherein the lid is sealable to the wall at the sealable end structure by a gasket seal formed by the gasket.

Claim 166. (Previously presented) The apparatus as defined in claim 162, wherein the lid is sealable to the wall by a weld seal.

Claim 167. (Previously presented) The apparatus as defined in claim 162, wherein the lid is cold-weldable.

Claim 168. (Previously presented) The apparatus as defined in claim 162, wherein lid is hot-weldable.

Claim 169. (Previously presented) The apparatus as defined in claim 168, wherein the lid is operable to be welded by one or more of torch welding, arc welding, ultrasound welding, or vibratory welding.

Claim 170. (Previously presented) The apparatus as defined in claim 162, wherein the lid comprises one or more of copper, gold, silver, palladium, platinum, iridium, ruthenium, rhodium, osmium, titanium, vanadium, chromium, iron, nickel, zirconium, niobium, molybdenum, tantalum, tungsten, rhenium, silicon, or aluminum.

Claim 171. (Previously presented) The apparatus as defined in claim 170, wherein the lid comprises a fill tube, and the fill tube comprise at least one of copper, copper-based alloy, gold, silver, palladium, platinum, iridium, ruthenium, rhodium,

RD-26623-1

osmium, titanium, vanadium, chromium, iron, iron-based alloy, nickel-based alloy, zirconium, niobium, molybdenum, tantalum, tungsten, rhenium, silica, alumina, or combinations thereof.

Claim 172. (Previously presented) The apparatus as defined in claim 171, wherein the fill tube is cold-weldable.

Claim 173. (Previously presented) The apparatus as defined in claim 157, further comprising a coating disposed on an inner surface of the capsule, and the coating comprises one or more of nickel, rhodium, gold, silver, palladium, platinum, ruthenium, iridium, tantalum, tungsten, or rhenium, and the coating and the first capsule are formed from different compositions.

Claim 174. (Previously presented) The apparatus as defined in claim 173, wherein the coating has a thickness in a range of from about 0.5 micron to about 250 microns.

Claim 175. (Previously presented) The apparatus as defined in claim 157, further comprising a liner disposed on an inner surface of the capsule.

Claim 176. (Previously presented) The apparatus as defined in claim 175, wherein the liner has a thickness in a range of from about 10 microns to about 5 millimeters.

Claim 177. (Previously presented) The apparatus as defined in claim 175, further comprising a diffusion barrier disposed within the capsule between the liner and the capsule inner surface.

RD-26623-1

Claim 178. (Previously presented) The apparatus as defined in claim 157, wherein each of the wall, the closed end structure, and the sealable end structure has a thickness in a range of from about 0.2 millimeters to about 10 millimeters.

Claim 179. (Previously presented) The apparatus as defined in claim 157, further comprising a baffle, wherein the chamber is divided into two regions by the baffle.

Claim 180. (Previously presented) The apparatus as defined in claim 179, wherein the baffle has a fractional open area in a range of from about 0.5% to about 30%.

Claim 181. (Previously presented) An apparatus, comprising:

a first capsule that comprises a closed end structure, a wall, and a sealable end structure, and which defines a chamber, wherein

the wall adjoins the closed end and extends therefrom; and

the sealable end structure adjoins the wall opposite the closed end structure, and the chamber is configured to receive a material and a solvent, and the solvent is capable of becoming supercritical at a predetermined temperature to provide a predetermined pressure in the chamber; and

a second capsule comprising a malleable metal and being operable to deform in response to the predetermined pressure, and the first capsule being disposed within the second capsule; and

a zero-stroke pressure device configured to receive the second capsule and operable only to counterbalance the predetermined pressure generated within the chamber by the supercritical solvent at the predetermined temperature.

Claim 182. (Previously presented) The apparatus as defined in claim 181, wherein the first capsule or the second capsule comprises one or more of copper, gold,

silver, palladium, platinum, iridium, ruthenium, rhodium, osmium, iron, nickel, titanium, vanadium, chromium, zirconium, niobium, molybdenum, tantalum, tungsten, or rhenium.

Claim 183. (Previously presented) The apparatus as defined in claim 181, wherein the first capsule comprises fused silica.

Claim 184. (Previously presented) The apparatus as defined in claim 181, wherein the first capsule comprises quartz glass.

Claim 185. (Previously presented) The apparatus as defined in claim 181, wherein the first capsule comprises one or more of borosilicate glass, aluminosilicate glass, soda lime glass, soda barium glass, soda zinc glass, lead glass, potash soda lead glass, potash lead glass, or potash soda barium glass.

Claim 186. (Previously presented) The apparatus as defined in claim 181, further comprising a pressure medium disposed within the second capsule and outside of the first capsule.

Claim 187. (Previously presented) The apparatus as defined in claim 186, wherein the pressure medium comprises one or more of water, carbon dioxide, or ammonia.

Claim 188. (Previously presented) The apparatus as defined in claim 181, wherein the first capsule comprises a lid, and the lid is operable to sealingly engage the sealable end structure.

RD-26623-1

Claim 189. (Previously presented) The apparatus as defined in claim 188, wherein the lid has a first pipe thread, and the sealable end structure has a second pipe thread configured to engage the first pipe thread, and the lid is sealable to the wall at the sealable end structure by a pipe thread seal.

Claim 190. (Previously presented) The apparatus as defined in claim 188, further comprising a compression fitting, and wherein the lid is sealable to the wall at the sealable end structure by a metal-to-metal compression seal formed by the compression fitting.

Claim 191. (Previously presented) The apparatus as defined in claim 188, further comprising a gasket, and wherein the lid is sealable to the wall at the sealable end structure by a gasket seal formed by the gasket.

Claim 192. (Previously presented) The apparatus as defined in claim 188, wherein the lid is sealable to the wall by a weld seal.

Claim 193. (Previously presented) The apparatus as defined in claim 192, wherein the lid is cold-weldable.

Claim 194. (Previously presented) The apparatus as defined in claim 192, wherein lid is hot-weldable.

Claim 195. (Previously presented) The apparatus as defined in claim 194, wherein the lid is operable to be welded by one or more of torch welding, arc welding, ultrasound welding, or vibratory welding.

Claim 196. (Previously presented) The apparatus as defined in claim 188, wherein the lid comprises one or more of copper, gold, silver, palladium, platinum, iridium, ruthenium, rhodium, osmium, titanium, vanadium, chromium, iron, nickel, zirconium, niobium, molybdenum, tantalum, tungsten, rhenium, silicon, or aluminum.

Claim 197. (Previously presented) The apparatus as defined in claim 196, wherein the lid comprises a fill tube, and the fill tube comprise at least one of copper, copper-based alloy, gold, silver, palladium, platinum, iridium, ruthenium, rhodium, osmium, titanium, vanadium, chromium, iron, iron-based alloy, nickel-based alloy, zirconium, niobium, molybdenum, tantalum, tungsten, rhenium, silica, alumina, or combinations thereof.

Claim 198. (Previously presented) The apparatus as defined in claim 181, further comprising a coating disposed on an inner surface of the first capsule, and the coating comprises one or more of nickel, rhodium, gold, silver, palladium, platinum, ruthenium, iridium, tantalum, tungsten, or rhenium, and the coating and the first capsule are formed from different compositions.

Claim 199. (Previously presented) The apparatus as defined in claim 198, wherein the coating has a thickness in a range of from about 0.5 micron to about 250 microns.

Claim 200. (Previously presented) The apparatus as defined in claim 181, further comprising a liner disposed on an inner surface of the first capsule.

Claim 201. (Previously presented) The apparatus as defined in claim 200, wherein the liner has a thickness in a range of from about 10 microns to about 5 millimeters.

Application No. 09/683,659
Reply to Office communication of March 17, 2006

RD-26623-1

Claim 202. (Previously presented) The apparatus as defined in claim 200, further comprising a diffusion barrier disposed within the first capsule between the liner and the first capsule inner surface.

Claim 203. (Previously presented) The apparatus as defined in claim 181, wherein each of the wall, the closed end structure, and said sealable end structure has a thickness in a range of from about 0.2 millimeters to about 10 millimeters.

Claim 204. (Previously presented) The apparatus as defined in claim 181, further comprising a baffle, wherein the chamber is divided into two regions by the baffle.

Claim 205. (Previously presented) The apparatus as defined in claim 204, wherein the baffle has a fractional open area in a range of from about 0.5% to about 30%.

Claim 206. (Previously presented) An article comprising the apparatus as defined in claim 181, wherein the sealable end structure is sealed such that the first capsule is impermeable to at least one supercritical fluid.
